

Enbridge and EVRAZ: A Saskatchewan success story

EVRAZ North America, a leader in steel manufacturing, recently announced a \$200 million investment in its Regina operations. At Enbridge, the heart of our business is the pipe in the ground. We insist on the best steel, and the best-made pipe. We think of EVRAZ as the gold standard, and that's why we've had a close, productive industry partnership dating back to 2006.

Economic Benefits

In Regina, EVRAZ employs more than **1,000 people**

pays more than **\$30 million** a year in provincial and federal taxes

creates **\$600 million** in annual regional spinoffs

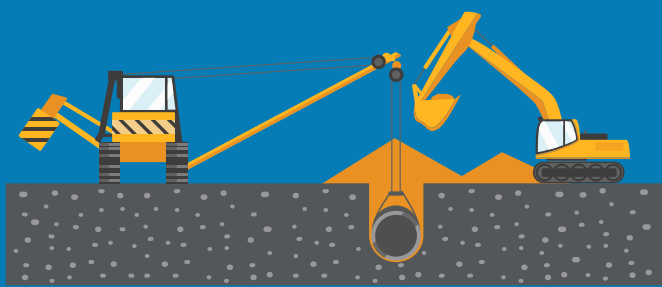

Since 2006, Enbridge has bought more than **2 million tons** of line pipe from EVRAZ

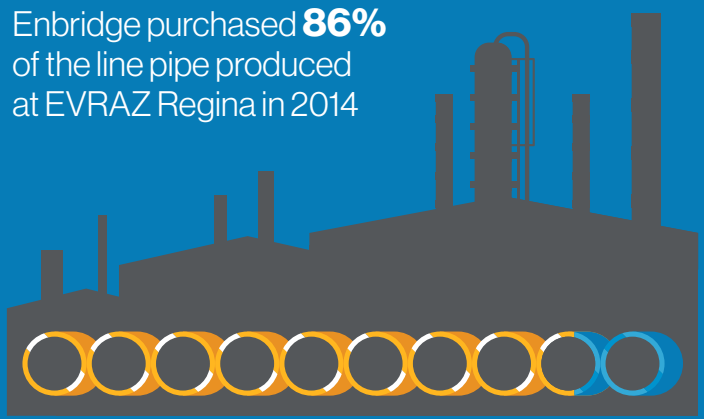

or 7,135 kilometres' worth

Nearly all the line pipe we'll need for the **\$7.5-billion** Line 3 Replacement Program, and many other projects, will come from EVRAZ

Enbridge purchased **86%** of the line pipe produced at EVRAZ Regina in 2014

Safety and Quality

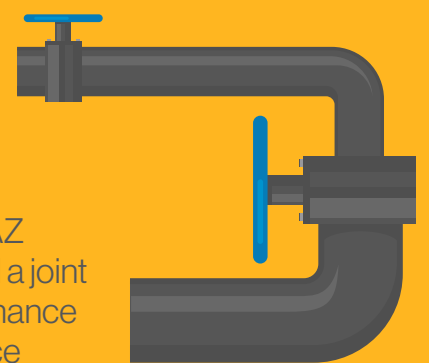

EVRAZ meets our demands for higher-quality pipe, with more rigorous and more frequent testing than industry standards

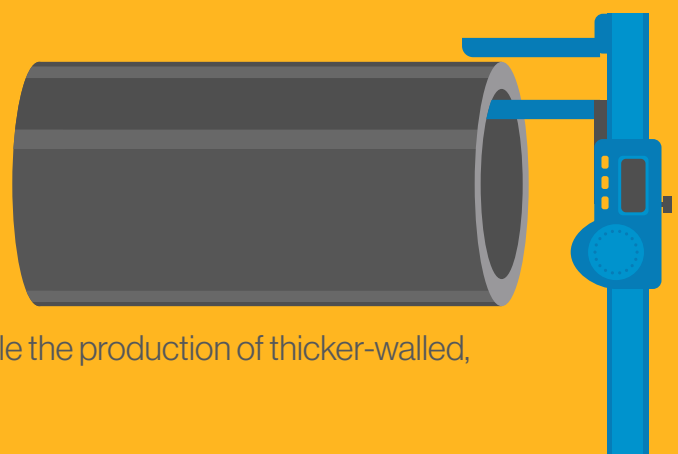

Our inspectors have unlimited access to EVRAZ facilities during the manufacturing process

Enbridge and EVRAZ recently announced a joint R&D program to enhance pipeline performance

96% of EVRAZ pipe steel is made of recycled metal – not only a green product, but excellent chemistry for line pipe

The **\$200-million** EVRAZ investment will enable the production of thicker-walled, 100% made-in-Canada pipe at its Regina facility.

For both Enbridge and EVRAZ, safety and quality are – and will always be – our highest priority.
